SDM Priority Area Crosswalk

Purpose: Identify preference sensitive priority health conditions for shared decision making implementation initiatives in Washington State
Excludes areas in which patient education/Choosing Wisely approach more appropriate (low value care/not clinically recommended)

Health Condition /Tx/Test	***Base Criteria (Beneficial to the people we serve)***					***Selection Criteria (Provider, hospital, health plan, purchaser benefits)***					
	Is SDM the best approach? *(More than one clinically appropriate treatment option, with significantly different clinical and/or personal implications for patients.)*	*Are quality PDAs available (OPTIONAL or under development?)*	*Is the condition highly prevalent, and/or is there high use/high variation IN WA?*	*Would an SDM intervention advance health equity?*	*Is this a current or future state health care priority area? E.g. Bree*	*Would the SDM intervention have significant financial or other value to providers?*	*Would the SDM intervention have significant financial or other value to payers and/or purchasers?*	*Are there clinical and policy champions throughout the affected health care entity?* *At the agency/policy level?* *Are we likely to get "engagement rather than mere compliance" among affected staff?*	*Are there lower "barriers to entry" to affected providers?*	*Is there real potential for the SDM intervention to spread beyond the affected clinical area or staff?*	*Are there certified PDAs available for the affected condition?* *(If no, could this be done in a timely manner?)*
TOLAC/ Caesarian Other OB											
Hip/Knee Osteoarthritis											
Lumbar Fusion/ Alternatives											
Other selected back pain/back surgery											
Cervical Spine Fusion/ Alternatives											
Selected End of Life Decisions											
Hyperlipidemia (Statin Choice) Clarify further											
Hypertension											
Low Dose CT-Lung											
Atrial Fib/ Perc. Left Atrial Appendage											
Anticoagulaton for Atrial Fib											
Implantable Defibrilator											

Obesity/Bariatric											
Hysterectomy/ alternatives for non-cancerous conditions											
Gallbladder											
Dx and Tx of CAD											
Carotid Artery											
PSA Screening											
Early Stage Prostate Cancer											
Enlarged Prostate											
Breast Cancer Screening											
Early Stage Breast Cancer											
Colorectal Cancer Screening											
Pregnancy Prevention Options for Women											
Shoulder Replacement Surgery											
Genomic testing in the absence of specific clinical condition											
ER admission for chest pain											
ER admission for low risk pulmonary embolism
