

Hepatitis C Virus Guideline Checklist

Health Plan-Level 2

The current state of the issue

The number of acute HCV cases has been steadily increasing in the United States between 2012-2019, with an estimated 133% increase in acute cases reported in 2019 compared to 2012. While the cure cascade for HCV is well-defined, disparities in testing and treatment prevent many patients from accessing treatment. The greatest gap occurs between diagnosis and treatment. In Washington, only an estimated 12% of patients with diagnosed HCV infections start direct-acting antiviral treatment. Together, we can support the screening and treatment of individuals with HCV to reach our goal of eliminating Hepatitis C in Washington State by 2030.

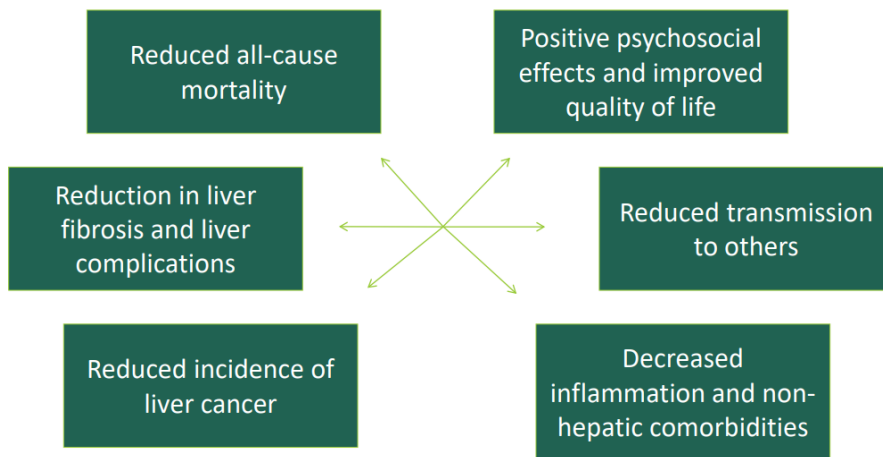

Increase screening opportunities

- ☐ Develop contracts that incentivize screening for HCV at community sites.
- ☐ Reimbursement models must support reflexive PCR testing to confirm positive HCV antibody tests.
- ☐ Identify opportunities to work with delivery sites and clinicians to engage with patients who may need treatment.

Measure outcomes

- ☐ Develop and incorporate two HCV metrics into value-based contracts.
- ☐ One metric on HCV screening for adults aged 18 to 79
- ☐ One metric for connecting people living with HCV to treatment, specifically the prescription of direct-acting antivirals (DAAs)

Benefits of Eliminating HCV

Resources

- The Bree Report on HCV is meant to supplement these resources.
