SCOAP Hospital Participation & Performance:

CCOAD Madula

Publically released data, by hospital Quarter 1, 2013 through Quarter 4, 2013

Metrics Key: See SCOAP website for detailed explanations

- 1 HIGHER PERCENTAGE IS BETTER: Antibiotics given within 60 minutes of incision being made for elective colon surgery- allows for infection prevention
- 2 HIGHER PERCENTAGE IS BETTER: Antibiotics discontinued within 24 hours of closure for elective colon surgery- allows for appropriate prophylaxis with as little risk as possible to the patient
- 3 HIGHER PERCENTAGE IS BETTER: Blood sugar testing among elective colon surgery patients with diabetes allows for appropriate management of diabetes and infection prevention
- 4 HIGHER PERCENTAGE IS BETTER: Antibiotics given within 60 minutes of incision being made for elective rectal surgery- allows for infection prevention
- 5 HIGHER PERCENTAGE IS BETTER: Antibiotics discontinued within 24 hours of closure for elective rectal surgery- allows for appropriate prophylaxis with as little risk as possible to the patient
- 6 HIGHER PERCENTAGE IS BETTER: Blood sugar testing among elective rectal surgery patients with diabetes allows for appropriate management of diabetes and infection prevention
- 7 HIGHER PERCENTAGE IS BETTER: Blood sugar testing among non-elective colon surgery patients with diabetes allows for appropriate management of diabetes and infection prevention
- 8 HIGHER PERCENTAGE IS BETTER: Blood sugar testing among non-elective rectal surgery patients with diabetes allows for appropriate management of diabetes and infection prevention
- 9 HIGHER PERCENTAGE IS BETTER: Antibiotics given within 60 minutes of incision being made for gastric bypass surgery- allows for infection prevention
- 10 HIGHER PERCENTAGE IS BETTER: Antibiotics discontinued within 24 hours of closure for gastric bypass surgery- allows for appropriate prophylaxis with as little risk as possible to the patient
- 11 HIGHER PERCENTAGE IS BETTER: Blood sugar testing among gastric bypass patients with diabetes allows for appropriate management of diabetes and infection prevention
- 12 HIGHER PERCENTAGE IS BETTER: Antibiotics given within 60 minutes of incision being made for sleeve gastrectomy surgery- allows for infection prevention
- 13 HIGHER PERCENTAGE IS BETTER: Antibiotics discontinued within 24 hours of closure for sleeve gastrectomy surgery- allows for appropriate prophylaxis with as little risk as possible to the patient
- 14 HIGHER PERCENTAGE IS BETTER: Blood sugar testing among sleeve gastrectomy patients with diabetes allows for appropriate management of diabetes and infection prevention
- 15 LOWER PERCENTAGE IS BETTER: Rate of adult appendectomy after false-positive diagnosis allows for tracking of improvement in the diagnosis and treatment of appendicitis
- 16 HIGHER PERCENTAGE IS BETTER: Rate of image concordance between imaging and pathology allows for tracking of improvement in the diagnosis and treatment of appendicitis
- 17 LOWER PERCENTAGE IS BETTER: Rate of pediatric appendectomy after false-positive diagnosis allows for tracking of improvement in the diagnosis and treatment of appendicitis
- 18 HIGHER PERCENTAGE IS BETTER: Rate of image concordance between imaging and pathology allows for tracking of improvement in the diagnosis and treatment of appendicitis

Symbols Key: (% of cases)

No 2013 data available

Not releasing data

n/a Too few cases to accurately evaluate (<10 cases)
