

AHRQ Safety Program for Telemedicine

ENROLL
NOW

Are you a **healthcare provider** interested in **improving the diagnostic process for lung, breast, and colorectal cancer** in the **telemedicine environment**?

If so, then you may be eligible to participate in this program.

About the program

- Free 18-month program beginning June 2023
- Combines evidence-based guidance with implementation strategies to improve the diagnostic process in the telemedicine environment
- You will receive **technical assistance, coaching, webinars, and tools** to help you implement sustainable improvements in your practice

Eligibility

- Adult and family primary care clinics, gynecology practices, community-based healthcare clinics, federally qualified health centers, and urgent care clinics
- Established telemedicine environment
- 12 or more abnormal cancer screenings or diagnoses per year (in lung, breast, or colorectal cancer)

Benefits of participating

- Learn best practices for closing the loop at critical points in the diagnostic process for breast, colorectal, and lung cancer in the telemedicine environment
- Prepare to serve increasing patient volumes over telemedicine
- Improve the patient safety culture
- Enhance teamwork and communication
- Receive CEU/CME and ABIM MOC points**
